12	80	20	1100	25	

The PFG shield anchor is for medium-heavy and heavy fixings in solid and hard materials like concrete, solid brick (max. M 8) and natural stone. Due to PFG's large expansion, it is also suitable for use in materials of slightly lower and porous quality as found in many old constructions.

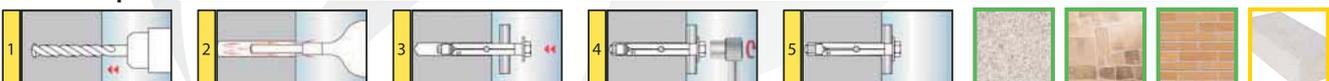

L'ancre bouclier PFG est pour fixations moyennes et lourdes dans des matériaux solides et durs comme le béton, la brique pleine (max. M8) et la pierre naturelle. En raison de l'expansion de grandes PFG, il est également adapté pour une utilisation dans des matériaux de qualité légèrement inférieure et poreuse que l'on trouve dans de nombreuses constructions anciennes.

El casquillo "PFG" la intención de medio de fijación / materiales pesados en lugares de difícil sólida como el cemento, el ladrillo (máx. M8) y piedra natural. Debido a su gran capacidad de expansión también es adecuado para su uso en materiales de alta calidad y un poco menor porosidad, tales como las que se encuentran en muchos edificios antiguos.

A bucha PFG destina-se a fixações médias/pesadas em materias sólidos duros como betão, tijolo (máx. M8) e pedra natural. Devido à sua grande capacidade de expansão é também adequada para o uso em materiais de qualidade e porosidade ligeiramente inferior, como os que se encontram em muitas construções antigas.
